### **DETAILED ACTION**

In view of the panel decision on 09/10/10, prosecution is hereby reopened.

#### ***Allowable Subject Matter***

Claims 1-48 are allowed.

#### ***Examiner's Statement of Reason for Allowance***

The following is an examiner's statement of reasons for allowance for all claims:

**Re claims 1, 17, 18, 23, 37 and 43.** The prior art fails to disclose a computer-implemented method and system of facilitating trading, comprising: automatically capturing data regarding a trade between two market participants that are each parties to the trade, wherein the trade results in an exchange of items between the two market participants, wherein one of the market participants is engaged in the trade as a buyer and the other of the market participants is engaged in the trade as a seller, and wherein the captured data includes data regarding the trade for both the buyer side and seller side of the trade; automatically determining from the captured data whether each of the two market participants has gained money or lost money from the trade in which they engaged; and

automatically updating a rating for each of the two market participants based on the determination of whether money was gained or lost from the trade, wherein the rating for each of the market participants is descriptive of the market participant as a trading party and is based on the outcome of trading between the two market participants.

The closest prior art is also the best U.S art: **Defarlo (US PUB: 20020004774)**.

Defarlo discloses a data analysis system that allows traders of equities and other

Art Unit: 3695

financial instruments to keep track of their trading history and to display a trade profile of their trading behavior. While Defarlo contemplates capturing and analyzing market data to determine if a trader has won or lost from the (see paras 0019,0020,0079 and 0080), Defarlo is silent on automatically updating a rating for each of the two market participants based on the determination of whether money was gained or lost from the trade, wherein the rating for each of the market participants is descriptive of the market participant as a trading party and is based on the outcome of trading between the two market participants.

Another prior art, **SAIAS (US PUB: 2003/0014379)**, discloses the automated market where economic agents such as organizations and firms anonymously submit terms of a favorable exchange and wherein an optimization engine within the automated market finds the trade which maximizes the preferences of the participating economic agent (see pg 22 paras 0317). Although SAIAS mentions the receipt of trading preferences from the economic agents to reconcile compatible buyers and sellers, SAIAS is silent on automatically, at the market process, facilitating a trade between the first trading process and a second trading process by providing the second trading process with a rating for the first trading process, wherein the second trading process remains unaware of the identity of the first trading process and yet is able to obtain, from the market process, a rating for the first trading process, wherein the rating is descriptive of the first trading process as a trading party, and wherein the rating is based on a statistical analysis of the outcome of prior trades between the first and second trading processes using data related to both the buyer and seller sides of the

Art Unit: 3695

prior trades.

Lastly, another prior art **Kane (U.S PAT: 6,317,728)**, discloses a computerized system with "agents" that provide trading "suggestions" or "recommendations" to a trader to help the trader make a future decision whether to enter into a trade. The "suggestions" or "recommendations" are taken as "votes" toward an ultimate decision by the executing device whether to trade, and if so, whether to buy or sell (See, e.g., Col. 5, lines 35-55, of Kane). While Kane's system, at the conclusion of the trade, updates "merit quotients" to rate his or her own agents for their prior votes to buy or sell, these merit quotients are not "rating for each of the two market participants," as recited in Claim 1. Kane's agents do not exchange items with other agents as a result of a trade. They only provide buy or sell votes to the trader. Some of Kane's agents may have voted for a position ultimately taken by the trader, and some of Kane's agents may have voted against the trader's position. Each of Kane's agents will be "rewarded or punished" for their respective votes, depending on the outcome of the trader's position. Nevertheless, none of Kane's agents are parties to the trade.

. Updated searches revealed no references that disclosed the claimed inventions nor were any secondary references identified which could be reasonably combined with the primary reference. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
